

Implementation of Data Management Plans and Data Stewardship in practice

Roland Krause
ELIXIR-LU

ECCB 2018

Workshop organization

Dr Bruce Banner aka The Incredible Hulk

Unrealistic depiction of a scientist

- ... can throw cars around and resist gun shots
- Dr Bruce Banner has 7 PhDs
- Stores all research results in databases

Your data management

This Introduction

What is data management and data stewardship?

Data management in larger collaborative projects

Identify common issues

How data stewardship and data management plans can help

Issues with current data management plans

Data stewardship vs data management

Management

Local, manipulating data
Data flow within the project

Examples

File naming conventions
Collecting metadata
Back-up

How to name files

<https://speakerdeck.com/jennybc/how-to-name-files>

Stewardship

Organizing data before and beyond the project

Examples

Choice of repositories
Decisions on meta data collection
Archival
Long-term care of valuable digital assets for additional discovery and downstream investigations
Notably includes all digital objects including documentation and analysis code

Data stewardship wizard

Do you need a data management plan?

RESEARCH DATA - OPEN BY DEFAULT

HORIZON 2020 GRANTEES ARE REQUIRED

take measures to ensure open access to the data underlying their scientific publications

provide open access to any other research data of their choice

Horizon 2020 grantees are encouraged to also share datasets beyond publication

PROJECTS MUST HAVE

DATA MANAGEMENT PLAN (DMP)

Provides information on:

the data the research will generate

how to ensure its curation, preservation and sustainability

what parts of that data will be open (and how)

Data management costs are fully eligible for funding

No repository imposed: deposit data where you want

<http://datafairport.org/>

<http://ec.europa.eu/research/openscience>

An Example Project: CSBdpwAP*

* Complex, sensitive, bulky data project with actual people

- Project on a complex disease
 - Human – patient – data
 - Genetic data
 - Animal models
- Public sources
- Data contributed by the project partners
- Data generated during the project on samples provided by the partners

Issues of data stewardship

- Data sharing across institutions
 - Data is only shared if required
 - Data deposited to public repositories is only a slice of existing
 - Data sharing agreements not in place
 - Note that GDPR requires contracts for processing of sensitive data
- Responsible principal investigators far removed from data handling
- People handling data do not sit at the Steering Committee
- Access to storage limitations
- Data is thrown together in directories without provenance
- Data is to be deposited in a complex database that never the PostDoc never finishes
- People leave the project and/or academic research

Open data

Embargoed until publication

Only the required slice of data published

Data published without accompanying analysis questionable

Perspectives

When make data open?

- On production
- On publication
- On end of the project
- Take your filthy hands of *my* data

Who owns data anyway?

- Principal investigator
- Institutions
- Funding bodies
- Patients donating samples

Thank you for your attention!
